

# Full Length Roof Framer

---

This valuable, 118-page, pocket-sized reference gives the entire length of all rafters for any span for 48 different pitches.

The author's (A.F. Riechers) objective was to make this book simple, unquestionably accurate and as brief and small as possible to be handy.

Along with the 48 different pitches are cuts and bevels for Common, Hip, Valley, Jack and Purlin; and also cuts and bevels for Gable and Cornice

Moulding. By doubling or tripling the spans, the range of this book can be increased to meet the requirements of any building or bridge, even should the plan run in the hundreds of feet.

Common problem situations are included to challenge the reader's understanding of the principles discussed. These problems were picked at random and with a little study you should be able to solve them all in a few minutes.

---

**When you have mastered this handy reference book, you should have your competitor outclassed on roof framing.**
